(54) Title: UMBRELLA MOUNT

(57) Abstract: An umbrella mount adapted to hold an umbrella shaft and to be detachably mounted to a support shaft such as a rear leg of a folding chair, lawn chair, or beach chair. The umbrella mount comprises a tube, a top binder, a bottom binder, a support member, and a securing member. The top binder detachably attaches the tube near its top end to the support shaft, whereas the bottom binder detachably attaches the tube near its bottom end to the support shaft. The binders are preferably hook and loop straps with non-slip collars. The bottom of the umbrella shaft is deposited into the tube. The support member prevents the umbrella shaft from slipping out the bottom end of the tube. The securing member adjusts to secure the umbrella shaft within the tube.
